Key Requirements

Design Requirements

Visual appearance of this crm system looks good and the general style looks the same for all web-pages of this system.

Design requirements apply to all pages of the website with no exceptions.

Navigation Requirements

Website allows user to surf the pages very comfortable and very good navigation system let you to get page that you need with 1-2 clicks.

On each page of the website easily to understand on which section you are locate now. That very useful, because user will easily understand where he is and he will easily make he is plan of action.

Software and Technology Requirements

Website supports and is tested on following browsers: Safari 9.1.1 and Google Chrome 50 on OS X. Other browsers support may vary and is not strictly required.

Website and all required implementation files are optimized for Java SDK 1.8, Spring 4.0.6, Hibernate 4.3.0, and PostgreSQL. External library dependency management is handled via Maven 4.0.0.

Security Requirements

In order to protect information from unwarranted access and modifying, website contains authentication procedure and implements a system of access roles. Specifically, there are two discrete roles for users: **client and staff** which can be selected during registration process and cannot be changed later.

Clients can make order, look for their future flight and they can searching for flight that they need. Staffs can look for their future flight.

Unauthorized users are redirected to login page when trying to access content functionality.
